
PP6 Gland Packing - Data Sheet

Service Capabilities

Temperature Range	-40°C to +250°C
Pressure Rating	Application Dependant
Rotary Speed	Static Only
pH Range	1 - 14

Product Information

PP6 has been specifically designed and produced for Man-Lids on tanks. PP6 is dense, square inter-braided from P.A.N. fibres that are thoroughly impregnated with P.T.F.E dispersion. Increasing environmental awareness and legislation make consideration of the material, braid quality and performance of Tank Lid Packings of paramount importance. PP6 is widely used in the static and road tank industry as the quality example of a braided tank packing.

PP6 is supplied in cut lengths cut on a 45 degree angle. The most common sizes we have available from our stocks are 14 x 14mm square in cut lengths 1590mm & 1050mm, 15 x 10mm in a cut length 1590mm and finally 15 x 10mm cut straight supplied in a length 1050mm.

Applications

Man-Lids, Tank Covers and Hatches against all chemicals that are compatible with PTFE.
